

**WORKPLACE SPECIFIC SAFETY STANDARDS FOR
MANUFACTURING ACTIVITIES TO ADDRESS COVID-19
As of May 18, 2020**

Purpose

These sector specific COVID-19 workplace safety standards for Manufacturing Activities are issued to provide owners and operators of manufacturing sites and workers and contractors with instructions to help protect against the spread of COVID-19 as manufacturing sites re-open. Workers must continue to telework if feasible.

These standards are minimum requirements only and are not exclusive or exhaustive. The public health data and matrix for disease prevention upon which these guidelines are based can and does change frequently, and the operator of the manufacturing site is accountable for adhering to all local, state and federal requirements relative to manufacturing activities. The operator of the manufacturing site is also responsible for staying abreast of any updates to these requirements.

Standards for Responsible Manufacturing Activities in Massachusetts

No manufacturing activity shall occur without meeting the State mandatory Safety Standards for Workplaces as applied to manufacturing facilities in this document. These sector specific COVID-19 Workplace Safety Standards for Manufacturing apply to all manufacturing (essential and non-essential) in operation during the COVID-19 public health emergency until rescinded or amended by the State. The operator of each manufacturing site or facility shall be responsible for meeting these standards.

The following workplace specific safety standards are organized around four distinct categories covering Social Distancing, Hygiene Protocols, Staffing and Operations, and Cleaning and Disinfecting.

I. Social Distancing

- Ensure separation of 6 feet or more between individuals at fixed working positions unless this distance is unsafe due to the particular nature of the manufacturing work or the configuration of the workspace
 - Manual work: reengineer workstations to increase distance between workers; install visual distancing markers on workstations to delineate 6 feet separations; place markers throughout facility to guide movement of individuals
 - Close or reconfigure worker common spaces and high density areas of facilities where workers are likely to congregate (e.g., break rooms, eating areas) to allow physical distancing
 - Cafeterias must practice physical distancing and appropriate hygiene measures and should operate with only prepackaged food
 - Designate assigned working areas (e.g., floor, building, factory zone) to individuals where possible to limit movement throughout the facility and limit contact between workers

- Improve ventilation for enclosed spaces where possible (e.g., open doors and windows)
- Stagger lunch and break times, regulating maximum number of people in one place and ensuring at least 6 feet of physical distancing during any meeting
- Face coverings are required for all workers, except where doing so may introduce a safety hazard to workers or where an individual is unable to wear a face covering due to a medical condition or disability
- Minimize the use of confined spaces (e.g., elevators, control rooms, vehicles) by more than one individual at a time; all workers in such spaces at the same time are required to wear face coverings
- Physical partitions separating workstations must be installed for areas that cannot be spaced out (partitions must be taller than a standing worker)

II. Hygiene Protocols

- Ensure access to handwashing facilities on site, including soap and running water, and allow sufficient break time for workers to wash hands to frequently; alcohol-based hand sanitizers with at least 60% alcohol may be used as an alternative
- Supply workers at workplace location with adequate cleaning products (e.g., sanitizer, disinfecting wipes)
- Require regular and not less than daily cleaning and sanitation of all high-touch areas such as workstations, door handles, and restrooms
- Post visible signage throughout the site to remind workers of the hygiene and safety protocols

III. Staffing and Operations

- Provide training to workers on up-to-date safety information and precautions including hygiene and other measures aimed at reducing disease transmission
- Facilities with highly manual work should reopen in gradual / phased approach, adjusting operations and work scheduling (working teams with different schedules or designated staggered arrival / departure time) to reduce density in the facility, minimize contact across workers and prevent congestion
- Limit visitors and service providers on site; shipping and deliveries should be completed in designated areas, outside the facility if possible
- Log everyone who comes in contact with site to enable contact tracing, including temporary visitors (e.g., those doing material drop-offs)
- Workers must stay home if feeling ill
- Workers who are particularly vulnerable to COVID-19 according to the Centers for Disease Control (e.g., due to age or underlying conditions) are encouraged to stay home
- Encourage workers to self-identify symptoms or any close contact to a known or suspected COVID-19 case to the employer
- Encourage workers who test positive for COVID-19 to disclose to the employer for purposes of cleaning / disinfecting and contact tracing. If the employer is notified of a positive case at the workplace, the employer shall notify the local Board of Health (LBOH) in the city or town where the workplace is located and work with them to trace likely contacts in the workplace and advise

workers to isolate and self-quarantine. Testing of other workers may be recommended consistent with guidance and / or at the request of the LBOH

- Post notice to worker and customers of important health information and relevant safety measures as outlined in government guidelines

IV. Cleaning and Disinfecting

- Conduct frequent cleaning and disinfection of site (after each shift, and more frequently if feasible)
- Keep cleaning logs that include date, time, and scope of cleaning
- Conduct frequent disinfecting of heavy transit areas, heavy machinery and high-touch surfaces (e.g., doorknobs, handrails, shared tools, bathrooms, elevators)
- In event of a positive case, shut down site for a deep cleaning and disinfecting of the workplace in accordance with current guidance
